## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Line 7, applicant needs to be more specific which "a difference" is intended (see claim 7).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Shirai et al. (6,091,294).

Shirai et al. (Figs 2-4) disclose an amplifier circuit comprising: an operation means (6) which is configured to input an input voltage ( $v_{in}/1$ ) to a non-inverted input terminal (+) and inputs an output voltage from an output terminal ( $v_2/v_1$ ) to an inverted input terminal (-) through feedback; and an amplifier (5) can be read as an output acceleration means which receives the input voltage ( $v_{in}/1$ ) and the output voltage

Art Unit: 2817

(v2/v1) as differential inputs and which outputs an electric current that is larger than the current output from the operational amplification means (6) to the output terminal (v1) since some of the current output from amplifier (5) via output (v2) is absorbed by resistor (9/R1) or maybe when a difference between input and output voltage is above a predetermined offset voltage exists between the differential inputs (voltage difference between positive (+) and negative (-) terminals of amplifier (5)).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5, 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shirai et al.

Regarding claim 5, wherein Shirai et al. circuit can be implemented for a driver IC.

Regarding claim 6, wherein operation amplifier having a plurality of current sources are well known in the art. Accordingly, utilizing such an amplifier would have been obvious to one having ordinary skill in the art.

***Allowable Subject Matter***

Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
